

Adjustment instructions for the height-adjustable table

When connecting the height adjustment system to the electrical outlet for the first time or again, the table adjustment process must be performed. It is best to do this when the table is empty or things need to be placed evenly in the center of the table (no more than 45 kg).

Press both the "Up" and "Down" buttons at the same time for at least 8 seconds.

Press the "Down" button and keep it pressed until the table reaches the lowest possible point.

The table is adjusted for use.
